

PROGRAMMING SUMMARY

FREQUENCY, Just a note...

How often you need to train will dramatically reduce once you reach EUPNEA. In the beginning, BEGINNERS should train OFTEN. Once your muscles are well trained, you can train LESS often. Said another way, once you achieve EUPNEA you only need a fraction of the training to maintain the previously built structure. Said another way, get there fast, then relax, but not all the way. You still need to train to maintain. Maintenance Mode is glorious, and more on that later. How OFTEN and how HARD you train is entirely up to you. Don't be a lazy ass.

A SINGULAR PRACTICE

Ujjayi Breathing - SLoow BREATHING - ALWAYS

AIR TUBE STRUCTURE - TOP 3...non-negotiable

- 1) SQUEEPING (CFAT): 1-3+ session/day, AND as desired (ad libitum)
